

SUMMARY

Computer Science & Engineering graduate skilled in Java, web development, API integration, software testing, and AI-assisted software development. Solo-developed and launched 3 Android apps on Google Play using vibe coding, prompt engineering, and agentic engineering workflows, with strong ability to build, debug, and ship real products independently.

PERSONAL PROJECTS

•Knowledge Nexus – Library Management System

Web application built using Java Servlets, JSP, and MySQL.

- Built user login and book management modules using Servlets, JSP, and JDBC.
- Implemented REST APIs for all book CRUD and borrow/return operations; frontend and backend communicate strictly via JSON-based API calls.
- Designed MySQL schema and used PreparedStatements for secure and efficient database access.

•ATM & Bus Booking Console Applications

Java console projects demonstrating core logic and OOP principles.

- Built an ATM simulation using MVC architecture with login, withdrawal, deposit, and balance checks.
- Developed a Bus Booking system using MVP architecture with seat booking/cancellation and fare calculation.

•Solo Android App Launches – Play Store

Solo-developed and launched 3 Android apps on Google Play using AI-assisted development and agentic engineering workflows.

- Built, tested, and launched 3 production Android apps independently, handling product design, development, debugging, release builds, and Play Store publishing.
- Used vibe coding, prompt engineering, and agentic engineering workflows to accelerate development, refactoring, UI implementation, and issue resolution.
- Applied modern mobile development practices including clean UI design, iterative shipping, release management, and user-focused feature improvements.

TECHNICAL SKILLS

Front-End Development: HTML, CSS, JavaScript, JSP.
Back-End Development: Java, Servlets, Python, REST APIs.
Database & Tools: MySQL, JDBC, Maven, Git, Bash.
AI-Assisted Development: Vibe Coding, Prompt Engineering, Agentic Engineering, AI Development Workflows.

EDUCATION

•Bachelor of Technology in Computer Science and Engineering 2020-2024
Vel Tech Rangarajan Dr. Sagunthala R&D Institute of Science and Technology, Chennai CGPA: 8.18

EXPERIENCE

•Zoho School for Graduate Studies July 2025 – January 2026
Incubation Intern Vellore
– Completed a rigorous incubation program in core Java, object-oriented programming (OOP), design patterns, and SOLID principles, applying concepts through real-world web application development.
– Built proficiency in data structures, algorithmic problem-solving, and debugging methodologies following professional software engineering standards.
– Explored AI tools and modern development workflows to enhance productivity and software design practices.
